

E03 easy acquisition

E05 mixed acquisition

E05 mixed utility

One initialization per learned family. Each study reuses the same paired 128 DEV worlds across its six evaluations; no best-checkpoint selection. Fixed endpoint: update 600. E03 and E05 change teacher/curriculum/input distribution, so their difference is not a controlled forgetting effect. DEV curves are learned closed-loop actions; teacher rollout success is a different training metric. Width 1024 does not imply parameter/work matching.
