

S22 original · complete graphs / 512

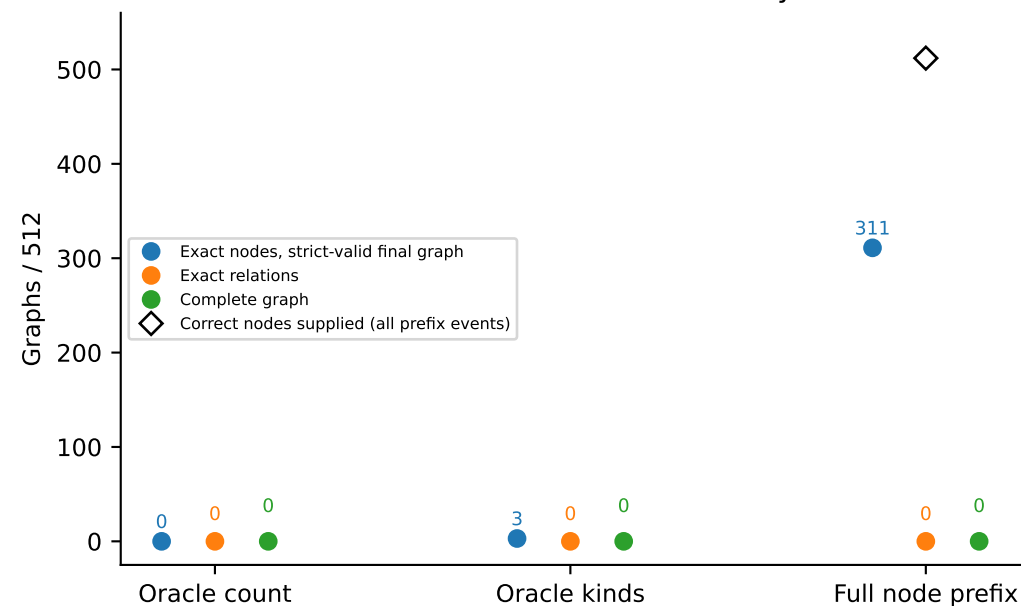

S22 broad · complete graphs / 512

original · held-out 3×4 boundary

broad · held-out 3×4 boundary

Privileged frozen-model diagnostic: no training, learned repair or promotion. All held-out exact relations and complete graphs remain zero. Full prefixes supply correct nodes on all 512 events; strict scored node counts also require final validity. Invalid outputs receive zero component credit. Some partial relation overlap remains. A zero empirical difference does not prove population equivalence or a universal capacity limit.
