

S19 categorical greedy learning

Fixed endpoint · same DEV events

Known-motif acquisition passes; held-out combination fails. One inspected development seed; no confirmation.

S19: 62,677,315 parameters, scratch; S18: 57,853,781 parameters, inherited training. Same incremental construction stream, different objectives/interfaces.

No parameter/FLOP/history match or isolated architecture claim. Gold-prefix diagnostics are not generated-graph accuracy.
