

A12 event-level exact task

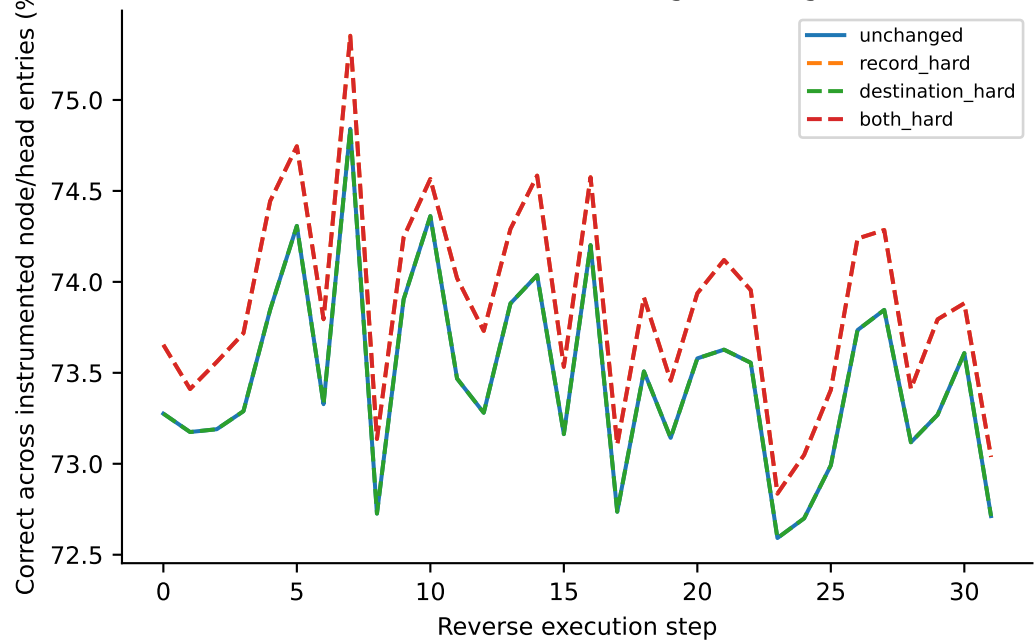

A12 event-level exact path

Paired task changes relative to unchanged

128 / 32: destination-head argmax diagnostic

A12: one frozen model, zero optimizer updates. Dashed policies are engineered hardening, not newly learned interfaces.

Path counts use events; head diagnostics use instrumented node/head entries. Their gap does not identify query-head failures. Paired events, not independent policies.
